OCTOBER 21-23, 2026 / ASTANA

# Central Asia's largest agro-industrial exhibition has concluded in Astana

| 350+ | 25 | 12 150+ | 3 DAYS |
|---|---|---|---|
| COMPANIES | COUNTRIES | VISITORS | OF THE EVENT |

From October 21 to 23, the international agro-industrial exhibition KazAgroFarm-2026 was held at the EXPO International Exhibition Center in Astana, organized by ExpoGroup with the support of the Ministry of Agriculture of the Republic of Kazakhstan and the Akimat of Astana. The large-scale industry event brought together over 350 companies from 25 countries, presenting modern technologies, equipment, and solutions for agriculture.

Over the three days, the exhibition was visited by more than 10,000 farmers from all over Kazakhstan, deputies, representatives of government agencies, diplomatic missions, international organizations, and business circles. The grand opening of KazAgroFarm-2026 was attended by high-ranking guests, including Azat Sultanov, Vice Minister of Agriculture of the Republic of Kazakhstan; Abdul Latif Al-Taher, Minister of Agriculture and Livestock of Libya; Gholam Golmohammadi, Vice Minister of Agriculture of Iran; Jaroslava Špalková, Vice Minister of Agriculture of the Czech Republic; Dr. Heike Renate Pajch, Ambassador Extraordinary and Plenipotentiary of Germany to Kazakhstan; and Sholpan Kozhabayeva, Director of ExpoGroup IEC. The exhibition served as a meeting place for global agribusiness representatives, Kazakhstani manufacturers, and farming enterprises.

Traditionally, the exposition combined two key areas of the agro-industrial complex. KazAgro showcased technologies and equipment for crop production—ranging from seeds, fertilizers, and plant protection products to agricultural machinery, harvesting, storage, and crop processing. The KazFarm sector covered livestock breeding, including genetics, pedigree breeding, feeding, veterinary services, and the production and processing of dairy and meat products.

TWO KEY AREAS OF THE EXPOSITION

### KAZAGRO

- Crop Production
- Machinery
- Harvest
- Storage and Processing

### KAZFARM

- Livestock
- Genetics
- Feeding
- Veterinary

TECHNOLOGIES AND INTERNATIONAL COOPERATION

# Professional dialogue without borders

KazAgroFarm-2026 brought together manufacturers, farmers, and international experts.

Participants paid special attention to the digitalization of agriculture, automation of production processes, and precision farming technologies. Companies demonstrated modern models of machinery, equipment, and their own technological developments. Visitors were able not only to get acquainted with new products but also to directly discuss with manufacturers the possibilities of their application in their farms.

One of the key features of KazAgroFarm-2026 was its broad international representation. Representatives from Germany, Czech Republic, Netherlands, China, Canada, Spain, Iran, and other countries took an active part in the exhibition. Throughout the three days, business negotiations, meetings with foreign partners, and discussions on prospects for cooperation in the agricultural sector took place.

The business program of the exhibition was equally eventful, bringing together international experts, business representatives, the academic community, and industry organizations. A central event was the celebration of the 75th anniversary of the Kazakh Whiteheaded breed («Akbas»). The anniversary brought together breeding livestock specialists, farmers, scientists, and industry representatives to discuss the development of domestic beef cattle breeding and the preservation of the breed's genetic potential.

**KAZAKH WHITEHEADED BREED «AKBAS»** The central event of the business program is the anniversary of the Kazakh Whiteheaded breed.

Significant attention was paid to international experience exchange. The Embassy of the Czech Republic organized a B2B seminar dedicated to organic farming and modern agricultural technologies. As part of the event, the presentation of the "Encyclopedia of Organic Agriculture" took place. Representatives of the Netherlands held the "NL Dairy Innovation Kazakhstan" seminar and business meetings with Kazakhstani companies focused on innovations in the dairy industry.

The program also included the conference "Agricultural Drones in Kazakhstan: From Equipment Accessibility to Efficient Field Operations," seminars on the development of pasture livestock farming, improving cattle breeding efficiency, and milk production. Separate events were dedicated to German-Kazakhstani agricultural cooperation, and companies in the German pavilion presented their own technological solutions.

# Knowledge, Solutions, Partnerships

Three days of experience exchange and agricultural sector development

The exhibition also became a platform for the interaction of science and business. Kazakhstani scientific organizations, including representatives of the National Agrarian Scientific and Educational Center, demonstrated their developments and achievements, and also signed a number of strategic agreements aimed at the development of the agricultural sector.

For Kazakhstani farmers, KazAgroFarm-2026 provided an opportunity within three days to get acquainted with the solutions of leading global manufacturers, receive expert consultations, compare technologies and equipment, establish direct contacts with suppliers, and find new business partners.

KazAgroFarm-2026 once again confirmed the status of Central Asia's largest agro-industrial exhibition, bringing together international business, government structures, the scientific community, and farmers on a single platform. The three days of work became a time for professional dialogue, experience exchange, demonstration of new technologies, and the development of international cooperation in agriculture.
